

Collection based Programming

Q:1

WAP to create a collection and iterate over the collection.

Collection based Programming

Q:2

WAP to create a collection and print all the Integer elements of the collection.

Collection based Programming

Q:3

WAP to create a collection and calculate sum of all the integer elements of collection.

Collection based Programming

Q:4

WAP to create a collection and print the largest integer and smallest integer available in collection.

Collection based Programming

Q:5

WAP to create a collection and print the length of all String available in collection.

Collection based Programming

Q:6

WAP to create a collection and print the largest String and smallest String available in collection.

Collection based Programming

Q:7

WAP to create a collection and remove all the elements other than Integer from the collection.

Collection based Programming

Q:8

WAP to create a collection and print and count all the three digit integers available in collection.

Collection based Programming

Q:9

WAP to create a collection and count the number of even integer numbers available in collection.

Collection based Programming

Q:10

WAP to create a collection of integers and count and print all the prime numbers available in collection.

Collection based Programming

Q:11

WAP to create a collection of integers and count and print all the palindrome numbers available in collection.

Collection based Programming

Q:12

<https://leetcode.com/problems/sequential-digits/description/>

Collection based Programming

Q:13

Write a program to identify and print all duplicate elements in a List.

Collection based Programming

Q:14

WAP to remove all the duplicates from a List.

Collection based Programming

Q:15

Write a program to merge two List objects into a single list without duplicates. Maintain the insertion order for unique elements.

Collection based Programming

Q:16

Compare Two Lists:

Write a program to compare two List objects and return:

- a. The common elements between them.
- b. The elements present only in the first list but not in the second.
- c. The elements present only in the second list but not in the first.

Collection based Programming

Q:17

Given a List of integers from 1 to N (with some numbers missing), write a program to find all missing numbers.

Collection based Programming

Q:18

Write a program to partition a List of integers into two sublists:

One with all even numbers.

Another with all odd numbers.

Collection based Programming

Q:19

WAP to print the frequency of each elements in List.

Collection based Programming

Q:20

Write a program to find two numbers in a List whose sum is equals to a target value provided by the user.

Collection based Programming

Q:21

Given a List of integers, write a program to find the first non-repeating element.

Collection based Programming

Q:22

WAP to store the binary values of a number in List.

Collection based Programming

Q:23

WAP to remove all the duplicate characters from a String.

Collection based Programming

Q:24

WAP to print all the characters from String which has appeared only once in the String.

Collection based Programming

Q:25

WAIJ to print the element with the highest frequency.

Collection based Programming

Q:26

WAIJ to print the element with the highest frequency.

Collection based Programming

Q:27

WAP to print the first non-repeating element in the List.

Collection based Programming

Q:28

WAP to print whether the list is in sorted order or not.

Collection based Programming

Q:29 Queue

Write a Java program to Check the elements stored in a queue is palindrome or not.

Collection based Programming

Q:30 Queue

write a Java program to Find the first non-repeating element in the array using a queue.

Collection based Programming

Q:31 Queue

Write a Java program to Find the minimum element in a queue without removing it from the queue.

Collection based Programming

Q:32 Queue

Write a Java program to Find the smallest and second smallest elements of array.

Collection based Programming

Q:33 Queue

Write a Java program to Find the sum of first three smallest elements of queue.

Collection based Programming

Q:34 Queue

Write a Java program to Find the Longest string in the queue.

Collection based Programming

Q:35 Queue

Write a Java program to Move all Even elements to the front of the queue while maintaining the relative order of other elements.

Collection based Programming

Q:36 Queue

Write a Java program to Print the all Negative numbers in the queue.

Collection based Programming
